MEMORANDUM FOR PRS (In-House Publication)

FROM: PROI (TI) (STINFO)

22 Dec 2000

SUBJECT: Authorization for Release of Technical Information, Control Number: **AFRL-PR-ED-AB-2000-237**Blanski, Rusty L; Phillips, Shawn; Lee, Andre, "Preparation and Properties of Polyhedral Oligosilsesquioxanes/Polymer Blends" (Abstract)

American Chemical Society Meeting (San Diego, CA, 01 Apr 2001) (Deadline: 31 Jan 2001)

(Statement A)

1. This request has been reviewed by the Foreign	gn Disclosure Office for: a.) appropriateness of distribution statement,
b.) military/national critical technology, c.) exp	ort controls or distribution restrictions, on, and e.) technical sensitivity and/or economic sensitivity.
	on, and e.) technical sensitivity and/or economic sensitivity.
Signature	Date
and/or b) possible higher headquarters review. Comments:	c Affairs Office for: a.) appropriateness for public release
Signature	Date
Comments:	FO for: a.) changes if approved as amended, and c.) format and completion of meeting clearance form if required
Signature	Date
appropriateness of distribution statement, d.) to national critical technology, and f.) data rights	.) technical accuracy, b.) appropriateness for audience, c.) echnical sensitivity and economic sensitivity, e.) military/ and patentability

The synthesis of silsesquioxane/polymer blends and copolymers has expanded greatly in recent years. These materials have the advantage of combining a well defined ceramic type molecule with an organic polymer which can result in a material that may bridge the performance gap between the two systems. Earlier, we reported that the organic side groups of polyhedral oligosilsesquioxanes (POSS) have an enormous influence on the solubility of POSS in polystyrene with the phenethyl POSS being the most soluble. We now report that phenethyl POSS is dispersible in a wide range of aromatic ring-containing polymers (polycarbonate, SB rubber, etc.) resulting in a clear blend. We also report that aliphatic POSS compounds are also dispersible in high density polyethylene. The synthesis of POSS/polymer blends as well as some physical properties will be discussed.
